Dual String Completion: Tri-Zone

These types of completions are commonly used in applications where zonal crossflow is undesirable, or regulations prohibit commingling. By utilizing a dual packer configuration, the lower and middle zones flow up dual tubing strings and the uppermost zone flows up the annulus. Tri-zone completions can be tailored to meet a variety of customer well requirements.

COMPLETION EQUIPMENT			
ITEM	QTY.	DESCRIPTION	Page #
1	1	Vertical Access Dual Wellhead	25
2	1	Primary Coiled Tubing	130
3	1	Secondary Coiled Tubing	130
4	1	Dual Packer	-
