

Description

The Select Energy Fixed Thread-On Casing Head provides a cost-effective method for isolating the production/surface casing annulus. The Casing Head is threaded directly onto the surface casing with either a pin or box-down configuration. Sealing is provided by O-rings contacting the production casing. The installation requires no welding on either the surface or production casing strings, eliminating potential cracks and inspection costs.

Applications

- The casing vent assembly is used to monitor the production casing/surface casing annulus for pressure buildup.

Features & Benefits

- The production/surface casing annulus is contained after the drilling rig leaves the well site.
- On-site replaceable seals.
- Eliminates welding on the surface and production casings.
- Custom configurations available on request.
- Available in both pin and box-down configurations.
- Complete with 2" vent assembly.

Specifications

Casing Sizes (in. / mm)	PSI (MPa)
4.5 x 7 (114.3 x 177.8)	1000
5.5 x 8.625 (139.7 x 219.1)	(7)
