Flanged Wellhead

The Flanged Wellhead system is primarily used where coiled tubing is to be installed on existing wells. By design, the hanger and optional flow tee assembly become part of the original wellhead. The hanger, and slip and seal set can be manufactured for compatibility with various well conditions, including high temperature and high-pressure.

Features & Benefits

- Proven flange design provides safety and reliability.
- Simplistic wrap-around split slip and seal assembly provide repeatable installation reliability.
- Optional flow tee assembly provides annular access between coiled tubing and wellbore.

Flanged Wellhead Assembly		
ITEM	QTY.	DESCRIPTION
1	1	Bottom Hole Test Adapter
2	2	Flow Tee
3	1	Annular Valve
4	1	Coiled Tubing Master Gate Valve
5	1	Flanged Coiled Tubing Hanger
6	1	Wing Valve
7	1	Jointed Tubing Master Gate Valve
