

Description

The Select External Grapple Connector provides a means to connect tools to High Density Polyethylene (HDPE) coiled tubing strings without restricting the inner diameter of the tubing. The connector is specifically engineered to grip the outer diameter of the HDPE tubing with a one-piece slip, designed to limit radial forces that could damage or collapse the HDPE coiled tubing.

Applications

- Connecting tools to HDPE coiled tubing strings.

Features & Benefits

- Single piece slip distributes radial forces evenly against OD of HDPE coiled tubing.
- Pin or box-down options.

Specifications

- Custom sizes available upon request.
