

## Description

The On/Off tool is designed specifically for coiled tubing operation where it is desirable to disconnect the tubing string from a downhole packer. The unique indexing “J” design allows separation or reconnection by coiled tubing reciprocation.

## Features & Benefits

- Durable lip-type seals in the overshot skirt assembly provide multiple On/Off sealing operation without seal damage.
- Overshot skirt is shear-pinned to the seal mandrel/fish neck to prevent packer loss when running in the well.
- Large bore design provides maximum flow area.

## Operation

- To unlatch from sealing connector, set down sufficient weight to shear the safety screw, then pick up the coiled tubing string to separate from the packer.
- To latch into the sealing connector, simply set down weight on the coiled tubing string and the overshot automatically rejobs into position.

## Specifications

Tool Length (in. / mm)	OD (in. / mm)	ID (in. / mm)	PSI (MPa)
26.50 (673.1)	3.625 (92.075)	1.25 (31.8)	3000 (21)
