

Description

The Snake Pin Assembly is connected to the coiled tubing and used to stab the coiled tubing into the injector, or for loading a drop spool string into the injector. One end of the Snake Pin Assembly is tapered, and the other end is connected to the coiled tubing with a swivel joint, and a flexible cable. Larger sizes incorporate a knuckle joint to reduce stress when the snake pin assembly passes over the gooseneck on the top of the injector.

Applications

- Stab the coiled tubing into an injector.

Features & Benefits

- Tapered lead-in end, welded to the cable.
- Coiled tubing end connector, welded to cable.
- Standard 25' flexible cable.

Specifications

Coiled Tubing Sizes (in. / mm)	Connections	Temp. Rating (°F / °C)	PSI (MPa)
1.25 - 3.5 (31.75 - 88.9)	Available in various threads to suit customer requirements	-40 - 275 (-40 - 135)	2000 (14)
